"reasoning": "We need to extract the DOM elements and provide Selenium Java code. The instruction: \"Do not use ID if the value has number in it.\" That means we should avoid using IDs that contain numbers? The IDs given: createLeadForm_companyName, createLeadForm_lastName, createLeadForm_firstName, ext-gen630. The last one has number. So we should not use ID for that element. For the others, IDs don't have numbers? They have underscores but no digits. So we can use ID for those? But maybe they want to avoid using ID if it has number in it. So for the submit button, we should not use ID. Use other locators like name or class or value.\n\nAlso we need to provide only Java code, no explanations. Provide code that uses Selenium to locate these elements and maybe interact? The question: \"Extract the below given DOM : ... and provide me the selenium java code.\" So maybe they want code to find these elements and maybe send keys? But not specified. Just provide code to locate them. Provide only Java code.\n\nThus produce code snippet:\n\nWebDriver driver = new ChromeDriver();\ndriver.get(\"url\");\n\nWebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\"));\nWebElement lastName = driver.findElement(By.id(\"createLeadForm_lastName\"));\nWebElement firstName = driver.findElement(By.id(\"createLeadForm_firstName\"));\nWebElement submitButton = driver.findElement(By.xpath(\"//input[@value='Create Lead' and @class='smallSubmit']\"));\n\nAlternatively use By.name for submit? name=\"submitButton\". So we can use By.name(\"submitButton\") or By.cssSelector(\"input[value='Create Lead']\").\n\nBut instruction: \"Do not use ID if the value has number in it.\" So for submit button, use By.name or By.xpath.\n\nThus produce code.\n\nAlso maybe we need to fill values and click? But not required.\n\nI'll produce a class with main method.\n\nLet's produce code:\n\nimport org.openqa.selenium.*;\nimport org.openqa.selenium.chrome.ChromeDriver;\n\npublic class LeadCreation {\n public static void main(String[] args) {\n System.setProperty(\"webdriver.chrome.driver\", \"/path/to/chromedriver\");\n WebDriver driver = new ChromeDriver();\n driver.get(\"http://example.com\");\n\n WebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\"));\n WebElement lastName = driver.findElement(By.id(\"createLeadForm_lastName\"));\n WebElement firstName = driver.findElement(By.id(\"createLeadForm_firstName\"));\n WebElement submitButton = driver.findElement(By.xpath(\"//input[@value='Create Lead' and @class='smallSubmit']\"));\n\n // Example actions\n companyName.sendKeys(\"Acme\");\n lastName.sendKeys(\"Doe\");\n firstName.sendKeys(\"John\");\n submitButton.click();\n\n driver.quit();\n }\n}\n\nBut maybe they want only the element locators. Provide code accordingly.\n\nLet's output only Java code."
